EDUCATION

University of California, Los Angeles (UCLA) *Expected Jun 2028*
B.S. Computer Science · B.S. Mathematics · GPA: 3.98
Relevant Coursework: Data Structures (CS 32), Software Construction (CS 35L), Linear Algebra (Math 33A/115A), Discrete Math (Math 61)

EXPERIENCE

Software Engineer · **Woooly** | *Python · LangChain · Docker* *Jun 2026 – Present*

- Built the environment generator behind an AI hiring platform that tests candidates on realistic day-to-day work instead of standard coding interviews, turning a job posting and tech stack into a runnable Docker codebase with deliberate flaws to find. Generated ~40 environments across 11 skill domains.
- Cut generation cost by 60% by matching each file write to a cheaper or stronger model based on its complexity, and cut build time by generating unrelated files in parallel.
- Added an LLM critic panel that reviews each finished environment and sends problems back for rework, flagging anything it cannot resolve for human review so generation can run unattended.

Software Engineer, AI Evaluation · **Architect AI** | *Python · TAU · TAU² · TAU-Mobile* *Oct 2025 – May 2026*

- Led a 3-person team building the TAU² (agent tool-use benchmark) simulation environment from scratch, including dummy APIs and stateful backends with realistic business logic.
- Built 5 evaluation domains across TAU, TAU², and TAU-Mobile, each with ~40 dummy tools over realistic sample data, graded against golden trajectories and scored in part by an LLM judge.
- Wrote 300+ benchmark tests calibrated to a 30–60% failure rate against frontier models, ran each 5-10 times with documented failures.
- Cataloged ~25 recurring failure modes per domain such as policy violations, PII leakage, and improper tool use.

Co-Founder & Frontend Lead · **Fitica** | *React Native (Expo) · AWS Lambda · DynamoDB* *Sep 2025 – Present*

- Co-founded an iOS app that acts as an AI personal trainer and nutrition coach, built with React Native (Expo) on an AWS Lambda and DynamoDB backend; led UI/UX design and frontend development.
- Shipped an AI workout designer that personalizes routines using user goals, experience level, schedule, and past workout data, now in TestFlight beta.
- Integrated Apple HealthKit for step tracking, scraped UCLA dining hall menus for accurate on-campus nutrition data, and added Apple IAP monetization.

PROJECTS

Swipr — Meal Swipe Exchange Platform | *React · Express · Supabase* *Jan 2026 – Present*

- Deployed a full-stack platform that lets UCLA students trade dining hall meal swipes; live in production and pending public launch.
- Built a React frontend, Express.js REST API, and Supabase (PostgreSQL) backend, planning the schema and service boundaries before writing code; CS 35L capstone project.

Physics & Chemistry Simulations | *TypeScript · JavaScript · HTML* *2023 – 2024*

- Built interactive simulations from scratch including an electric field visualizer, n-body gravity simulator, ideal gas model, and chemical kinetics simulator.
- Collaborated with an AP Chemistry teacher; demos are now used in classroom instruction.

SKILLS

Languages: Python, C++, JavaScript/TypeScript, Java, C#, HTML/CSS
Frameworks & Tools: React, React Native (Expo), Next.js, Node.js, AWS, DynamoDB, Supabase, Docker, Git, Figma
AI / ML: Multi-agent pipelines, LLM benchmark design, tool-calling evaluation

ACTIVITIES

Officer & Web Developer · **ACM Studio @ UCLA** | *React · Python · Notion API* *Nov 2025 – Present*

- Maintained and extended the club website (React static site with Notion CMS integration) for UCLA's largest game-development club, adding pages and reworking UI as club needs changed.
- Built a Python Discord bot handling moderation, automated bot detection and banning, event leaderboards, and Google Sheets integration.
